PROJECTS

Driver Drowsiness Detection (Deep Learning) | Python, TensorFlow, OpenCV

- Developed a deep learning model using CNNs to detect driver drowsiness and trigger an alert system. Utilized OpenCV for real-time video processing and TensorFlow for feature extraction.
- Monitored driver's eye movements and head position to ensure road safety.

Financial Fraud Detection System (ML + NLP) | Python, Scikit-Learn, Stream lit

- Built a financial fraud detection system using machine learning techniques and NLP. Leveraged graph databases (Neo4j) and LLaMA2 NLP model to identify suspicious transaction patterns. Integrated a Stream lit dashboard to visualize fraud connections and generate real-time alerts
